Conduct in-depth, personalized weekly health coaching sessions with clients who gain knowledge, learn skills, and are guided toward action steps to build lifelong healthy habits needed to meet and sustain their individual goals for living independently.

2025-present Director of Community Health, U of M Center for Interprofessional Education, Ann Arbor, MI
Lead the development and execution of community-based participatory research strategies to foster positive relationships between C-IPE and community collaborators, ensuring alignment with C-IPE goals while promoting community partnerships to improve health for all. Enhance interprofessional student learning through experiential team-based community health programs to assess and address adverse determinants of health upstream in communities where people live, work, play, worship, and age.

RESEARCH INTERESTS

As a methodologist, my research is aimed at strengthening health in communities through community-based participatory research and community capacity building. My research team has an established record of transformation in the public, private, and tribal health sectors at the local, state, federal, and international levels. Through an innovative, integrated theoretical and methodological approach to community health needs assessments, my research seeks to mitigate upstream determinants of health to improve health justice in communities where we serve.

Environmental Exposure Assessment and Evaluation of Biospecimen Collection Approaches Through One Health Community Clinics in Rural Georgia
Environmental exposure assessment research remains limited among rural and medically underserved populations, despite the potential for exposures arising from agricultural activities, industrial operations, household environments, and changing environmental conditions. Rural communities in central Georgia experience many of these potential exposure sources yet have been largely underrepresented in environmental health research. This pilot project will conduct a community-engaged environmental exposure assessment study in partnership with People & Pets Project, a nonprofit organization that operates monthly One Health clinics providing integrated human and animal health services in Twiggs, Houston, Putnam, and Macon-Bibb counties.

Building Climate Resilience: Repositioning Community Health Workers as Knowledge Brokers
Extreme heat, flooding, and air pollution and other extreme weather events associated with climate change are exacerbating health risks in India and compounding gender-based health inequities in India. Accredited Social Health Activists (ASHAs), India's one-million-strong, all-women cadre of community health workers, stand on the frontlines of these crises. However, ASHAs have been largely marginalized from healthcare systems, treating them only as passive collectors of health information data rather than as active knowledge producers with hyperlocal expertise on climate-health risks. This project will use community-based participatory research to strengthen community capacities and position ASHAs as knowledge brokers. Working with the Ramalingaswami Centre on Equity and Social Determinants of Health (RCESDH) at the Public Health Foundation of India (PHFI) and local ASHA and Mahila Arogya Samiti networks, the project will co-develop a structured process for translating that hyperlocal knowledge into inputs upon which the formal health system can act.

Beyond the Volcanoes: A Partnership for Health in Rural Nicaragua
Health inequities related to gender, ethnicity, socioeconomic status, and geography exist in rural Nicaragua. The purpose of this research program is to improve health equity in rural Nicaragua through community-based participatory research. Prochaska's Transtheoretical model provided the framework for this program. This CBPR study utilized a stepwise, longitudinal cluster design. Pre- and post-test surveys were used to assess household pollution including kitchen layout, stove type, fuel usage, and women and children's health from 2011 to 2018. Two hundred women consented for participation in the improved cookstove program. One hundred ninety-one women were followed through to one-year post-intervention to the maintenance stage. Due to political unrest that began during the final evaluation data collection period in 2018 and the subsequent COVID-19 pandemic, face validity of the results was not achieved until June 2022.

Childhood Obesity in the Home, School, and Community
Childhood obesity is increasing to epidemic proportions in the United States. The multifactorial determinants of childhood obesity compound the difficulty in understanding this phenomenon. There is limited research that holistically examines the influence of home, school, and community on childhood obesity. To better understand the multifactorial determinants of childhood obesity, a secondary analysis of data from the Early Childhood Longitudinal Study, Kindergarten Cohort will be examined. Bronfenbrenner's Ecological Model of Human Development will provide the framework for this study. The aims of the application are to: (1) describe the multifactorial determinants of childhood obesity, (2) explore the intra- and interrelationships, including spatial interactions, between the contexts of the home, school, community, and childhood obesity, (3) describe the difference in body mass index trajectories of children from the start of kindergarten through the end of fifth grade by food consumption, physical activity, sedentary behavior, and ecological influences. Hierarchical linear modeling and spatial modeling will be used for data analysis. Findings from this study will provide a

Influence of the Home, School, and Community on Childhood Obesity: A Nested Model
Childhood obesity is rapidly increasing across the United States; however, the ecological influences of the home, school, and community on childhood obesity have rarely been explored within the same population. Childhood obesity, nutrition, and physical activity are affected by ecological influences in the home, school, and community; yet little is known about the intra- and interrelationships among childhood obesity and these ecological contexts. This gap in knowledge stimulates questions to be researched through secondary analysis of data from the Early Childhood Longitudinal Study, Kindergarten Cohort (ECLS-K; National Center for Education Statistics, 2001a; 2001b; 2004b) using the advanced statistical techniques of hierarchical linear modeling and spatial modeling. Both hierarchical linear modeling and spatial modeling are relatively new to the health sciences; and neither statistical technique has been used to study childhood obesity within the contexts of the home, school, and community.

International

2008-2009 Global Health Nursing Consultant, International Service Learning
*2009-2026 Primary Health Care and Global Health Nursing Consultant, Praxis Center

CONSULTING POSITIONS

2005-2007 **Indiana Child Care Health Consultant Program,** Statewide Professional Nurse Consultant, Indianapolis, IN; Consulted with state policymakers to advocate for the health and safety of children in early care and education settings. Advised early care and education executive directors and staff regarding their health and safety policies and procedures to assist them in meeting national accreditation standards.

2008-2009 **International Service Learning,** Global Health Nursing Consultant, Spokane, WA; Provided consultation on policies, procedures, and documentation for international health clinics and services in partnership with local community agencies for the provision of primary health care services to individuals, families, and communities from vulnerable populations.

*2008-2014 **School Health, Inc.,** Early Childhood Advisory Board Consultant, Rolling Meadows, IL; Advised the board on services, trainings, and products related to early childhood, birth through five years of age.

*2009-2026 **Praxis Center,** Primary Health Care and Global Health Nursing Consultant, San Jose, Costa Rica; In collaboration with local governments, our team develops, implements, and evaluates respite services for locally licensed physicians and nurses. Our team works with locally licensed physicians from Costa Rica and Nicaragua respectively to allow physicians on their social service rotations in these remote health posts to return to their families for vacation. Our work provides for a sustainable, continuum of care while allowing domestic premedical arts, nursing, and public health students the opportunity to experience the provision of health services in both urban and rural international settings under the supervision of locally licensed providers.

*2011-2019 **National Resource Center for Health and Safety in Early Care and Education,** Caring for Our Children Consultant, Denver, CO; Contributing editor and author to Caring for Our Children (4th Ed.). and advised steering committee members on health and safety policies and procedures for staff health.

*2019-2022 **Pokagon Band of Potawatomi,** Community-Based Participatory Research Consultant for Health Services Department, Dowagiac, MI; Developed a community health needs assessment for the tribal association using community-based participatory research methods to ensure the assessment was culturally, linguistically, and environmentally appropriate.

*2020-2022 **Eastern Shore Rural Health Association,** Community-Based Participatory Research Consultant; Onancock, VA; Developed, implemented, and evaluated a community health needs assessment for two rural, counties on the Eastern Shore of Virginia, including two migrant encampments from Haiti and Central America. Developed programs to increase access to health care and transportation to mitigate barriers to health care as identified by the analyses on the social determinants of health.
